

MONK MODE ACTIVATED
Productivity Tracker

PRODUCTIVEYOU.LOVABLE.APP

SEED ROUND · 2026

ProductiveYou

The discipline operating system. Monk Mode Activated.

PROBLEM · 2 / 15

\$1T

lost in productivity each year to depression and anxiety. The attention economy is the cause — and we live inside it.

World Health Organization, 2022 (estimate)

WHY EXISTING APPS FAIL · 3 / 15

The 21-day myth has bankrupted a generation of habit apps.

They optimise for streak vanity, not lasting change.

- Median time to form a habit is 66 days, not 21 (Lally et al., UCL, 2010).
- Top habit apps see 4-week retention below 10 percent.
- Streak resets punish missed days — the opposite of behaviour-change science.
- 40 percent of daily behaviour is habitual (Wood & Neal, Duke, 2006). Yet no consumer app treats habits as a 2-year arc.

SOLUTION · 4 / 15

A 2-year monk-mode OS built on behavioural science.

Non-negotiables + habits + journal + Wrapped + browser surface.

- Dual-system: rules you refuse to break, paired with habits you build.
- Forgiving streaks — one missed day is logged, never punished.
- Daily ritual: habit checklist, journal, todo, daily quote.
- Yearly reflection: Wrapped — your discipline as a shareable recap.
- Chrome extension converts every new tab into a discipline checkpoint.

PRODUCT · 5 / 15

Shipped. Live at productiveyou.lovable.app.

React + Supabase. PWA today, native mobile next quarter.

- Auth, sync, history, journal, todo, Wrapped — all in v1.
- Manifest-V3 Chrome extension with toolbar popup + new-tab dashboard.
- PDF / image export for shareable streak cards.
- Built end-to-end on Lovable + Cursor — 10x build-cost reduction.

MARKET · 6 / 15

Two adjacent markets, one product.

PRODUCTIVITY

TAM \$14.5B in 2026 » \$30.9B by 2034 at 9.9% CAGR. (Fortune Business Insights)

MENTAL HEALTH

TAM \$8.6B in 2026 » \$35.3B by 2034 at 19.2% CAGR. (Fortune Business Insights)

DIGITAL HEALTH

TAM \$16.3B in 2026 » \$58.4B by 2036 at 13.6% CAGR. (Meticulous Research)

SAM & SOM · 7 / 15

A defensible 18-month SOM of \$42M.

English-speaking knowledge workers actively buying self-improvement.

- TAM (combined): \$23B in 2026.
- SAM: 280M English-speaking knowledge workers — \$4.8B at \$17 ARPU.
- SOM (year 3): 1% of SAM = 2.8M users » \$42M ARR at \$15 blended ARPU.
- Beachhead: Gen-Z and millennial readers of Atomic Habits / Huberman audience.

BEHAVIOURAL SCIENCE MOAT · 8 / 15

What we ship is what the research says.

Three peer-reviewed primitives baked into the product surface.

- 66-day window (Lally 2010) » onboarding sets a 730-day arc, not 21 days.
- Forgiving streak (Lally 2010, supplementary) » missed days don't reset progress.
- Cue-routine-reward (Duhigg / Wood) » every habit pinned to a contextual cue.
- Implementation intentions (Gollwitzer 1999) » user-defined trigger phrases per habit.

BUSINESS MODEL • 9 / 15

Freemium » Pro » Coach.

Consumer SaaS with B2B expansion through coaches and HR teams.

- Free: 5 habits, 3 non-negotiables, 7-day history.
- Pro \$6/mo or \$48/yr: unlimited habits, full history, voice journal, Wrapped, exports.
- Coach \$24/mo per seat: cohort dashboards for coaches, therapists, corporate wellness.
- Chrome extension lowers CAC ~30% by acting as a top-of-funnel install loop.

UNIT ECONOMICS • 10 / 15

Math investors actually care about.

Modelled on benchmarks from Calm, Headspace, Notion, and Streaks.

- Blended ARPU: \$42 / year (8% paid conversion, mix of monthly + annual).
- CAC: \$9 via content + referral + Chrome-store install (-30% vs paid social).
- Gross margin: ~88% (Supabase + Cloudflare scale linearly).
- Payback: < 4 months. LTV / CAC: ~11x at scale (24-month avg lifetime).
- Contribution margin per Pro user: \$32 / year after infra + payments.

WHY NOW • 11 / 15

Three tailwinds, one window.

The attention crisis is finally monetisable.

- Mental-health spend up 54% post-pandemic (McKinsey Consumer Health, 2024).
- Gen-Z spend on self-improvement apps up 4x since 2020 (Sensor Tower, 2025).
- AI tooling (Lovable, Cursor, Supabase) reduces build cost ~10x — solo founders can now compete with Series-B teams.
- Apple intelligence + Android focus-mode primitives validate the discipline category.

COMPETITION • 12 / 15

Existing players leave a gap we own end-to-end.

None combine ritual + reflection + 2-year horizon + browser surface.

- Streaks / Habitica — gamified, single-habit, fragile streaks.
- Calm / Headspace — content libraries, no behaviour tracking, no commitment loop.
- Notion / Todoist — flexible but require setup tax users abandon in week 1.
- Our wedge: dual-system + journaling + Wrapped + Chrome surface in one product.

ROADMAP • 13 / 15

From v1 to platform in 12 months.

Sequenced for retention compounding, not feature sprawl.

- Q1 — iOS + Android via Expo, push notifications, Apple Health integration.
- Q2 — Coach mode + cohort dashboards. First 5 B2B wellness pilots.
- Q3 — On-device AI nudges from consented journal sentiment.
- Q4 — Wrapped 2.0 with social sharing — viral year-end loop.

TEAM • 14 / 15

Operator-led, customer-funded so far.

Founder built v1 solo on Lovable in 6 weeks. 100% open to lead hires.

- Founder / CEO — product lead. Previously shipped consumer SaaS to 200k users.
- Founding engineer — full-stack TS, Supabase, mobile. Open hire from seed.
- Founding designer — brand + UX systems. Open hire from seed.
- Advisors — behavioural-science PhD (TBD), B2B wellness GTM (TBD).
